Assignment (1)

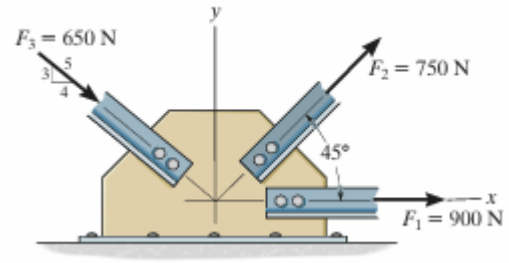

1. *Determine the magnitude and direction, measured counterclockwise from the positive x axis, of the resultant force acting on the ring at O, if FA = 750 N and u = 45°*

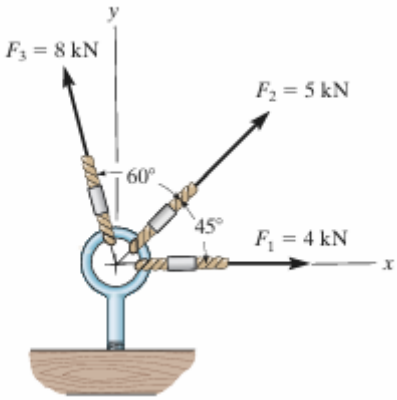

2. *Determine the magnitude of the resultant force and its direction, measured counterclockwise from the positive x axis*

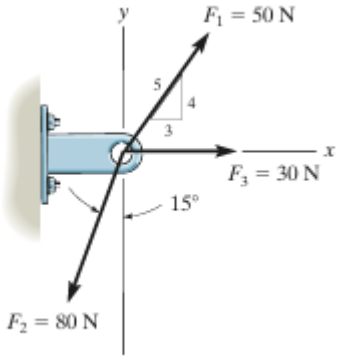

3. *Determine the magnitude of the resultant force acting on the plate and its direction, measured counterclockwise from the positive x axis.*

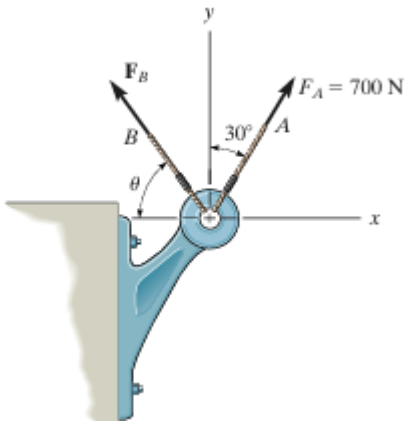

4. *Determine the magnitude of the resultant force and its direction, measured counterclockwise from the positive x axis*

5. *. Express each of the three forces acting on the support in Cartesian vector form and determine the magnitude of the resultant force and its direction, measured clockwise from positive x axis*

6. *Determine the magnitude and orientation u of FB so that the resultant force is directed along the positive y axis and has a magnitude of 1500 N*
