Assignment (3)

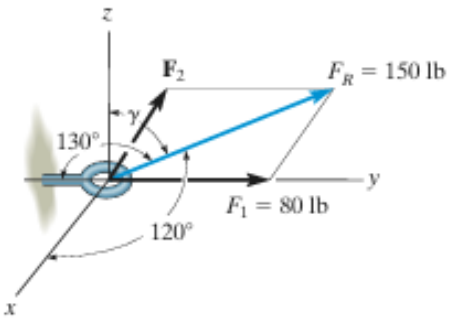

1. *The tower is held in place by three cables. If the force of each cable on the tower is shown, determine the magnitude and coordinate direction angles α, β , γ of the resultant force. Take x= 20 m , y= 15 m.*

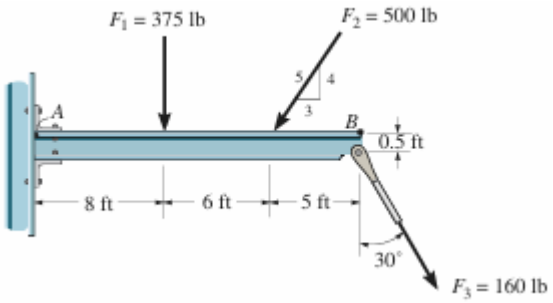

2. *Determine the magnitude and coordinate direction angles of the resultant force.*

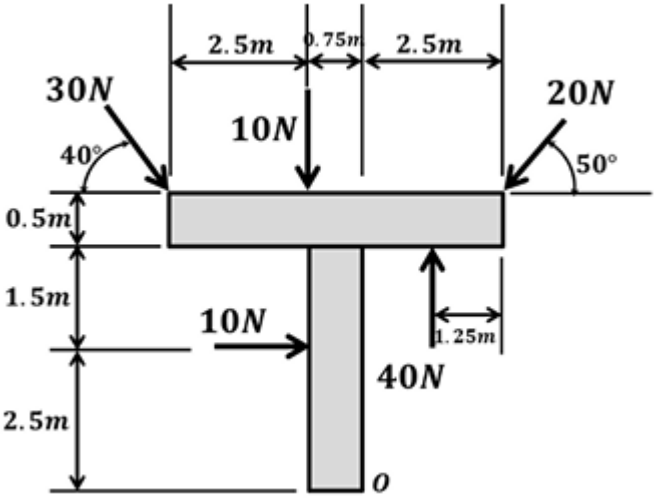

3. *Two forces F1 and F2 act on the screw eye. If the resultant force FR has a magnitude of 150 lb and the coordinate direction angles shown, determine the magnitude of F2 and its coordinate direction angles*

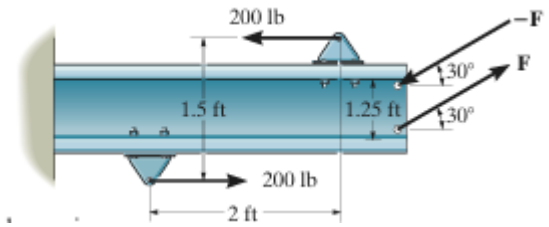

4. *Determine the moment about point A of each of the three forces acting on the beam.*

5. *Determine the resultant moment acting about point O.*

6. *Two couples act on the beam. If F = 125 lb , determine the result ant couple moment.*

7. *Two couples act on the frame.If the resultant couple moment is to be zero, determine the distance d between the 80-lb couple forces*
